

User story: As a user, I want to register and log in, but if I come again within 30 minutes, I don't want to login again, I want the website to save my data.

Solution: Email + password authentication, JWT access tokens stored in localStorage, basic protected routes.

Satisfaction: After logging in our auth layer of the app automatically creates the JWT access tokens and stores in frontend for 30 minutes, so the user can pass the verification without logging in again in the next 30 mins.

User story: As a user, I want to give my learning docs or youtube urls, so the application will generate the learning path for me.

Solution: AI Agent will generate the learning path by calling the OpenAI .

Satisfaction: AI Agent will analyze the document and generate the best learning path for the user.

User story: As a user, I want to give my learning docs or youtube urls, so the application will generate the test every day to track and keep my progress .

Solution: AI Agent will generate the test every day by calling the OpenAI .

Satisfaction: AI Agent will analyze the document and generate the test for the user.
